

The Modicon[®] Quantum[™] PLC

Leading performance and exceptionally high
availability to handle the most critical applications

Make the most of your energySM

Schneider
Electric

The Modicon Quantum PLC provides a scalable, modular architecture that is **configurable to meet the needs** of even the most critical solutions from a single-rack system to a plant-wide architecture.

Ideally suited for industries that require continuous operation and rapid responsiveness to achieve optimum cycle times, the Modicon Quantum PLC offers integrated communication connectivity, extensive diagnostics functionality and exceptional memory and data storage.

Memory and storage

With 3 MB of internal memory for programs and data as well as 8 MB of PCMCIA memory for program data and files, the Modicon Quantum PLC has the processing power and flexibility for any application. The PLC can hold the complete source project, process complex data structures, time stamp diagnostic information at source and store recipes or tracking data.

Open and flexible

With its modular and flexible architecture (extension racks, remote I/O, processors, PCMCIA memory...), the Modicon Quantum PLC meets the needs of the most complex applications, in both centralized and distributed topologies.

It offers an Ethernet Modbus® TCP/IP port and a web server directly integrated into the processor. It supports distributed I/O and the use of standard/open communication protocols. Ethernet communication modules embrace the newest ODVA standard for Ethernet/IP which combined the former Ethernet/IP standard with the Modbus TCP/IP standard. This provides even more flexibility in distributing I/O and managing Ethernet communications.

High availability and efficiency

Redundant Quantum CPUs have a dedicated built-in Ethernet port (100BASE-FX) that provides rapid synchronization of all data from the primary CPU to the secondary or standby CPU making the Modicon Quantum PLC hot standby system the solution for time-critical applications that can't afford unscheduled down time.

When combined with Unity™ Pro programming software, the hot standby offer effectively meets the needs of users: more memory, enhanced performance and built-in hardware redundancy. What's more, it also offers supremely easy system setup, and improved management and communication functions – all without impacting performance.

Reduce your development costs

The Unity Pro development software is the only programming tool you need to fully develop, test, debug and manage your applications that leverage the current Modicon line of industrial controllers. Its versatility, ease-of-use and built-in library of pre-tested application function blocks allow users with multi-processor applications to share ideas and information visually, so individuals and teams can benefit from their collective experience and work together more effectively. As a result, you save time and money by reducing on-site development, installation times and debugging across your application's entire lifecycle.

Choose your language

Unity Pro offers five IEC 61131-3 languages as standard. Each section of code can be programmed in the language of your choice, adapted to each processing operation. The edit, debugging and operation tools are accessible whatever the language used.

Increase your productivity through heightened awareness

A customized environment

By setting simple parameters, graphic screens can be used to set up complex specialized functions in line with the usual practices specific to each application area.

The integration of external files in our Unity software using hyperlinks simplifies the overall management of your application.

The Unity environment can integrate all your own functions developed in VBA to automate repetitive operations.

Libraries for your standards

Access genuine object-oriented programming: elementary functions can be encapsulated in function blocks and data structures can be organized into control system objects.

By adding your own objects to the library in this way, you can control the development of your applications, prepare for future developments and share access to your expertise.

A functional approach

You are free to organize your application into "process functions" for direct access to the required function using a simple browser.

This approach can be based on the S88 model relating to resource sharing in batch applications.
